[Virtual Ed Link H1N1 Training Courseware Ready for Nationwide Rollout](#)

Swine Flu Courseware Available on SSMS Portal

FAIRFIELD, NJ--(Marketwire - September 30, 2009) - Virtual Ed Link, Inc. (PINKSHEETS: **VRED**) is pleased to announce today that its H1N1 Online eLearning Course as part of the integrated Safety and Security Management System (SSMS) is ready for rollout nationwide. The company has been in discussions with federal and local officials to plan for a rollout of the Safety and Security Management System on a national scale. "The revenue implications for the company are staggering," says VRED CEO John Bay. "It would dwarf the projections that the company has so far issued."

As the human swine flu outbreak continues to spread throughout the United States, schools and governments that fail to plan and prepare for pandemic events such as public health emergencies, like H1N1 Swine Flu, create risks for their students, parents, employees and constituents that can include the loss of lives, bad publicity, and distress and unease within their municipal base. These are situations where mass notification and alerts are simply not enough.

Virtual Ed Link, in conjunction with WISE eLearning Solutions, has added this courseware to the SSMS so that students and families can protect themselves from this lethal threat. The course is designed to help parents and the public understand what a pandemic is, what the H1N1 flu is and how to protect themselves and their family from this lethal threat.

"eLearning has always been an integral component of the SSMS product suite," stated Dr. Alan McCartney, Chief Operating Officer. "With the addition of the H1N1 courseware, not only are we the premier safety provider for school and private environments, we have now extended our reach into the family and community as well."

Virtual Ed Link has been working to make the new courseware available for release and ready for deployment to schools and organizations nationally for the upcoming school calendar and flu seasons. The integration of eLearning, a world class notification system and the ability to continually receive up-to-date data, clearly puts VRED into a leadership role in technology devoted to the protection and safety of school children and communities throughout the United States.

About Virtual Ed Link, Inc.

Virtual Ed Link, Inc. (PINKSHEETS: **VRED**) sells the Safety and Security Management System (SSMS), which uses proprietary core technology solutions developed by Viyya Technologies. The Safety and Security Management System is marketed and sold primarily to schools and colleges around the U.S. and geared to be used as a collaborative Web 2.0 tool to share general information retrieved from any internet source among the school users, and especially in the event of threats or danger, to disseminate alerts to help and guide students, parents, faculty and law enforcement in the actions necessary to help protect school attendees and school infrastructure.
